### **Small Scale Food Processing Appropriate**

All developing countries are struggling to develop food supplies to ensure their populations are adequately fed. Obviously, it is not always necessary or even desirable to start-up large scale manufacturing or processing plants when the easier and cheaper way is to begin with small scale equipment. This leads to another problem. In the developed countries we are used to looking for the fastest, most efficient, largest or whatever piece of equipment, and that is not necessarily the most ...

### **Book Review by the Editor - Wiley Online Library**

Small-scale food processing is important worldwide. For individual processors, it is highly accessible as a start-up business, especially for women; farmers and fishermen can readily diversify into processing to increase their incomes; and high added-value enables processors to earn an income from relatively small scales of production. For policy makers: small-scale food processing can create employment, increase food security and improve nutritional standards. Written by an experienced food ...

The small-scale fisheries sector tends to be firmly rooted in local communities, traditions and values. Many small-scale fishers are self-employed and usually provide fish for direct consumption within their households or communities. Women are significant participants in the sector, particularly in post-harvest and processing activities.
