On the other hand, sol-gel synthesis is known to provide the controllable composition and dispersity of the particles. In present work, stable sols of nickel hydroxide obtained by controllable hydrolysis were converted into oxide form and then reduced to metallic state.

Synthesis and characterization of carbon/ceramic composite ...

Sol-gel synthesis is one of the simple, fastest and economically less expensive method, and has its own advantages like low processing temperature, homogeneity of the produced material and formation of the complex structures or composite materials. We believe that this detailed review will provide an insight into sol-gel synthesis of MONPs along with their characterization and diverse ...

The Stöber process is a well-studied example of polymerization of an alkoxide, specifically TEOS. The chemical formula for TEOS is given by Si(OC 2 H 5) 4, or Si(OR) 4, where the alkyl group R = C 2 H 5. Alkoxides are ideal chemical precursors for sol-gel synthesis because they react readily with water. The reaction is called hydrolysis, because a hydroxyl ion becomes attached to the silicon ...
