Solution Electric Power Distribution System

Signals transmission and power distribution at the right time to the right place. We have been designing electrical architectures for more than 100 years and leading the industry in the evolution of vehicle architectures. We like to think of the electrical distribution system as a nervous system, moving power and data throughout a vehicle. High-speed data transmission systems send information from the vehicle's eyes and ears (sensors) to the brain (computing platforms).

solution Electrical Systems - Power Supply and Distribution Solutions. Power distribution at plants is designed to cope with a complete loss of power, so-called Station Black Out. Framatome engineered and developed solutions for this purpose, with emergency generators, batteries, or diverse energy supply systems e.g. hydrogen energy storage. We also propose instrumentation and control associated with emergency systems such as emergency diesel generators integrated system.
