

## Evidence Chart Key

Evidence	What it tells us:
<b>Fossil Lives</b>	
1. growth rings in fossil trees or shells	Growth rings tell us the number of years that individual lived.
2. curled up fossil trilobites	Trilobites may have curled up to avoid predators just as pill bugs do today.
3. the contents of fossil nests	Some dinosaurs cared for their young while still in the nest.
4. Fossils of many individuals of the same species together	These animals probably lived in herds.
5. a change in the shape of a feature over time	The function of that feature has also changed.
<b>Geologic Time</b>	
1. layers in the rocks	The rocks were deposited at different times and represent parts of the history of the Earth.
2. index fossils	These fossils can help us to date rock layers around the world.
3. Fossil shells on mountain tops	What is now the top of the mountain used to be under the sea.
4. identical fossils on widely separated continents	The continents were once joined together.
<b>Paleontology</b>	
1. Fossil marine animals in the desert	There was once an ocean covering this area.
2. shapes of leaf edges	The leaf edges tell us if the climate where the plant grew was generally cool or warm.
3. tooth marks in fossil shells	The animal living in the shell was preyed upon by another animal.
4. fossil pollen	Fossil pollen tells us what kinds of plants lived in past ecosystems.
<b>Biodiversity</b>	
1. fossils of organisms no longer alive today	Living things in the past were different from those of today.
2. features that are shared by more than one species	These species are probably related to each other.
3. the extinction of many	This would indicate a mass extinction caused

### Stories from the Fossil Record - University of California ...

Choose one of the four sections to begin learning about the many things fossils can teach us.

### Stories from the Fossil Record

Stories From The Fossil Record provides students with a basic understanding of how fossils can be used to interpret the past. There are four different pathways to explore: biodiversity, geologic time, paleoecology and past lives. Designed for grades 5-9.

### Stories from the Fossil Record

The purpose of Stories From the Fossil Record is to provide students with a basic understanding of how fossils can be used to interpret the past. There are four different pathways to explore: Biodiversity, Geologic Time, Paleoecology, and Past Lives.

### Stories From the Fossil Record Teacher's Guide

While exploring a fossil site, you find a bunch fossil leaves with smooth edges. What could you learn from this evidence? b) what the temperature was like 6. What can fossil pollen tell you about the past? a) the type of ecosystem that existed. 7. Give an example of how fossils can provide evidence for: individual behavior, family behavior, or social behavior. Explain. Answers will vary. 8 ...

### Stories From the Fossil Record Posttest

The extinction of one group of organism, like corals, on which other organisms depend 3 Name: \_\_\_\_\_ Date: \_\_\_\_\_ Period: \_\_\_\_\_ Stories From the Fossil Record Analysis Questions Directions: Please answer each of the following questions in complete sentences. 1. What may fossils provide evidence of? 2. How many organisms from the past have gone extinct? 3. How would you predict the age of a rock if you found an index fossil in a layer of rock in Montana and a similar fossil in a layer of rock in ...

### Stories From the Fossil Record Analysis Questions

Evolution - Evolution - The fossil record: Paleontologists have recovered and studied the fossil remains of many thousands of organisms that lived in the past. This fossil record shows that many kinds of extinct organisms were very different in form from any now living. It also shows successions of organisms through time (see faunal succession, law of geochronology: Determining the relationships of fossils with rock strata), manifesting their transition from one form to another. When an ...

### Evolution - The fossil record | Britannica

1. fossil marine animals in the desert There was once an ocean covering this area. 2. shapes of leaf edges The leaf edges tell us if the climate where the plant grew was generally cool or warm. 3. tooth marks in fossil shells The animal living in the shell was

preyed upon by another animal. 4. fossil pollen

### Evidence Chart Key - rowan.k12.ky.us

Fossil record, history of life as documented by fossils, the remains or imprints of organisms from earlier geological periods preserved in sedimentary rock. In a few cases the original substance of the hard parts of the organism is preserved, but more often the original components have been replaced by minerals deposited from water seeping through the rock .

### fossil record | Definition & Facts | Britannica

Fossil Record Definition. A fossil record is a group of fossils which has been analyzed and arranged chronologically and in taxonomic order. Fossils are created when organisms die, are incased in dirt and rock, and are slowly replaced by minerals over time. What is left is a mineral impression of an animal which once existed. Many fields and ...

### Fossil Record - Definition and Examples | Biology Dictionary

The website (Stories From the Fossil Record) provides a link to the vocabulary words and definitions. I ask students to use this link rather than Google the definitions. We want to be certain that we are using the most appropriate definition for the unit we are studying. I use the examples of wind/wind or sink/sink as a reminder that words can have surprisingly different definitions depending on the context in which they are used.
