### **Texas Fruit And Vegetable Gardening**

Gardening in Central Texas is a game of balance. With plenty of sun, we can grow a wide variety of fruits and veggies. But the scorching summer heat and lack of rainfall can singe and suffocate more delicate plants. Fortunately, there are hybrids and cultivars that were specially designed to withstand our arid climate.

Proper fertilization is another important key to successful vegetable gardening. The amount of fertilizer needed depends upon the soil type and the crops you are growing. Texas soils vary from deep sands to fertile, well-drained soils to heavy, dark clays underlaid by layers of caliche rock or hardpan. Crops grown on sandy soils usually respond to liberal amounts of potassium, whereas crops grown on clay soils do not.

Beans are some of the easiest, most nutritious vegetables that you can plant, and there are several varieties of bush beans, pole beans, and lima beans that do well in the Texas garden. Full sun and a moist, well-draining soil will improve your chances of getting a great harvest. Be sure to mulch the beans to keep them from drying out. Carrots

Texas's famously warm climate means plenty of fruits and vegetables are, possibly, in-season more or less all the time. It can be tricky for transplants to wrap their minds around this truth. A variety of crops can be planted, grown, and harvested more than once per year in many areas of Texas, making them available more or less year-round. These year-round foods include:
