Health performance and economic performance are interlinked. Wealthier countries have healthier populations for a start. And it is a basic truth that poverty, mainly through infant malnourishment and mortality, adversely affects life expectancy. National income has a direct effect on the development of health systems, through insurance coverage and public spending, for instance. As demonstrated in 1997 by the WHO Commission on Macroeconomics and Health for a panel of 167 countries ...

Although the application of economics to health and public health issues did not begin at CDC, its use at the agency no doubt has accelerated its development and maturity in the field. Economics was introduced to public health research because of a desire to make transparent and fair decisions on the basis of the best tools and data possible. Beginning in the late 1970s, the Office of Program Planning and Evaluation was the agency's focus of economic evaluation and decision analysis ...

In addition to quantifying the health and economic impacts of intervention policies, our

results allow federal and state authorities to avoid following a "one-size-fits-all" strategy, and instead enact policies that are better suited for each state. This is because we provide insights for each state separately and show what policies would have worked in that particular state. For example ...

The strong links between socioeconomic factors or policies and health were documented in the World Health Organization (WHO) Commission on Social Determinants of Health report. Yet even when health and health equity are seen as important markers of development, expressing the benefits of social determinants of health interventions in health and health equity terms alone is not always sufficiently persuasive in policy settings where health is not a priority, or when trade-offs exist between ...

Achieving a long, healthy life often requires the input of scarce resources, and that makes it, at least in part, an economic problem. About one out of every six dollars spent in the U.S. economy goes to some form of healthcare, including spending on physicians, nurses, dentists, hospitals, pharmaceutical drugs, and medical research scientists.

4. A strong economic case can also be made as patient harm exerts a resource burden on the health system and on society more broadly. Patient harm manifests directly in the need for additional treatment, more diagnostic testing, (re)admission to hospital or prolonged hospital stay, and other additional use of scarce healthcare resources. The impact of preventable safety lapses on health system efficiency is
